Traditional Databases 😞

Needs a **high-level understanding** of databases

Servers need to be **constantly running** & maintained to be accessed

Kintone Databases 😊

Databases are created
with intuitive drag-&-drop
GUI

No servers need to be set
up by the user

The screenshot shows the Kintone app builder interface for the 'Sales & Leads' app. At the top, there's a navigation bar with 'Sales & Leads > Settings'. On the right, it says 'Last Updated: Mary Simpson 12:10 AM' with buttons for 'Discard Changes' and 'Update App'. Below the navigation is a toolbar with tabs: 'Form' (selected), 'Views', 'Graphs', and 'App Settings'. A large green button labeled 'Save Form' is prominent. To the left is a sidebar with various field types: Label, Rich text, Number, Radio button, Multi-choice, Date, Link, Department selection, Related records, Blank space, Field group, Record number, Created datetime, and Updated datetime. To the right, the 'Leads & Sales' form is displayed with fields for Lead Title, Sales Representative, Contact Info (Company Name, Website, Contact Name, Job Title, Email, Telephone Number), and a Product list at the bottom.
