Other Engineering Positions

Technical Engineer

TECHNICAL ENGINEERING DIVISION

This division provides technical support to our partner firms with everything from servers, networks, databases, backups, and integrations.

Technical Engineering is a great role for those who want to work with backend technologies, stress test our products & client setup, and work as a bridge between the Tokyo & US offices.

Developer Tools Engineer

SYSTEM DEVELOPMENT DIVISION

This division creates tools that external developers use to build integrations and customizations on Cybozu's products. They oversee our products' various SDKs such as `js-sdk`, & `kintone-ui-component`.

Developer Tools Engineering is a great role for those who want to build everything from VS Code extensions to CLI tools.
